# National Food Control Systems: Challenges and Opportunities

**Dr. Jean Kamanzi, FAOSFS**

Regional Food Safety & Quality Advisor for Africa

[jean.kamanzi@fao.org](mailto:jean.kamanzi@fao.org)

November 21, 2016, Abeokuta, Nigeria

Food and Agriculture  
Organization of the  
United Nations

## Outline of Presentation

- ☐ Introduction: foodborne diseases in Africa
- ☐ Management of hazards
- ☐ Pillars of a National Food control system
- ☐ FAO/WHO Assessment tool
- ☐ State of national food control systems
- ☐ Case of Nigeria: challenges and opportunities
- ☐ Conclusion

Food and Agriculture  
Organization of the  
United Nations

## Introduction: WHO Report on the Global Estimate of Foodborne Diseases (launched on 4.12.2015)

- Foodborne diseases are a Global concern
- Approximately 600 Million (almost **1 in 10 people** in the world) fall ill every year from eating **contaminated food**.
- There are an estimated **420 000 deaths** foodborne diseases related per year.
- **1/3** of children under 5 years old.

Food and Agriculture  
Organization of the  
United Nations

## Introduction: WHO Report on the Global Estimate of Foodborne Diseases (launched on 4.12.2015)

- **Foodborne diseases are a Global concern**
- 31 foodborne hazards resulted in **33 million DALYS** (Disability Adjusted Life Years) in 2010
- WHO (2012) – key hazards & risk factors:
  - Malaria: 55 million DALYS
  - Tuberculosis: 44 million DALYS
  - (HIV/AIDS: 92 million DALYS)
- The burden of FBD at 33 million DALYS is of similar magnitude to at

Food and Agriculture

United Nations

# Introduction: WHO Report on the Global Estimate of Foodborne Diseases (launched on 4.12.2015)

**Causes:**

**Contaminated foods** containing:

- ❖ harmful bacteria,
- ❖ viruses,
- ❖ parasites,
- ❖ toxins or
- ❖ chemical substances

Food and Agriculture  
Organization of the  
United Nations

## Introduction: WHO Report on the Global Estimate of Foodborne Diseases (launched on 4.12.2015)

- **Foodborne diseases in Africa**
- Africa has the highest burden of foodborne diseases per population and the highest rate death rate.
- More than **91 million fall ill each year** from foodborne diseases
- **137000** foodborne disease related –deaths (1/3 of the global death toll)

Food and Agriculture  
Organization of the  
United Nations

# Introduction: WHO Report on the Global Estimate of Foodborne Diseases (launched on 4.12.2015)

## ➤ Foodborne diseases in Africa

➤ 70% of the foodborne diseases are due to diarrheal diseases caused by:

- ❖ non-typhoidal *Salmonella*,
- ❖ *E. coli* and
- ❖ foodborne cholera.

Food and Agriculture  
Organization of the  
United Nations

# Introduction: WHO Report on the Global Estimate of Foodborne Diseases (launched on 4.12.2015)

- **Foodborne diseases in Africa**
- **Chemical hazards cause 25%** of the deaths from foodborne diseases in Africa are specifically due to:
  - ❖ **cyanide**: paralysis (Konzo) caused by **cyanide in cassava**, is unique to the African Region. It leads to the death of 20% of those affected.
  - ❖ **afatoxin in nuts, maize (BACA)**

Food and Agriculture

United Nations

## WHO Report on the Global Estimate of Foodborne Diseases (launched on 4.12.2015)

**HOWEVER,**

the risk of getting foodborne diseases is higher and most severe in low- and middle- income countries than in high income countries

**WHY ???**

Food and Agriculture  
Organization of the  
United Nations

# WHO Report on the Global Estimate of Foodborne Diseases (launched on 4.12.2015)

## Risk Factors:

- ❖ preparing food with unsafe water
- ❖ poor hygiene
- ❖ poor food production and storage conditions
- ❖ low levels of literacy and education
- ❖ insufficient food safety legislation
- ❖ lack of enforcement of food safety legislation

**Food and Agriculture  
Organization of the  
United Nations**

## **National Food Control systems**

### **Pillars of a National Food Control System: Government Responsibility**

- ❖ **Legislative framework**
  - **Food Safety policy**
  - **Food safety law and regulations**
- ❖ **Institutional Framework**
  - **Competent authorities**
  - **Inspection activities**
- ❖ **Laboratory Support**
- ❖ **Food Safety and Quality Information, education and communication(IEC)**

Food and Agriculture  
Organization of the  
United Nations

## Foundations for FAO/WHO tool

System resources

How does your  
system interact  
with  
stakeholders?

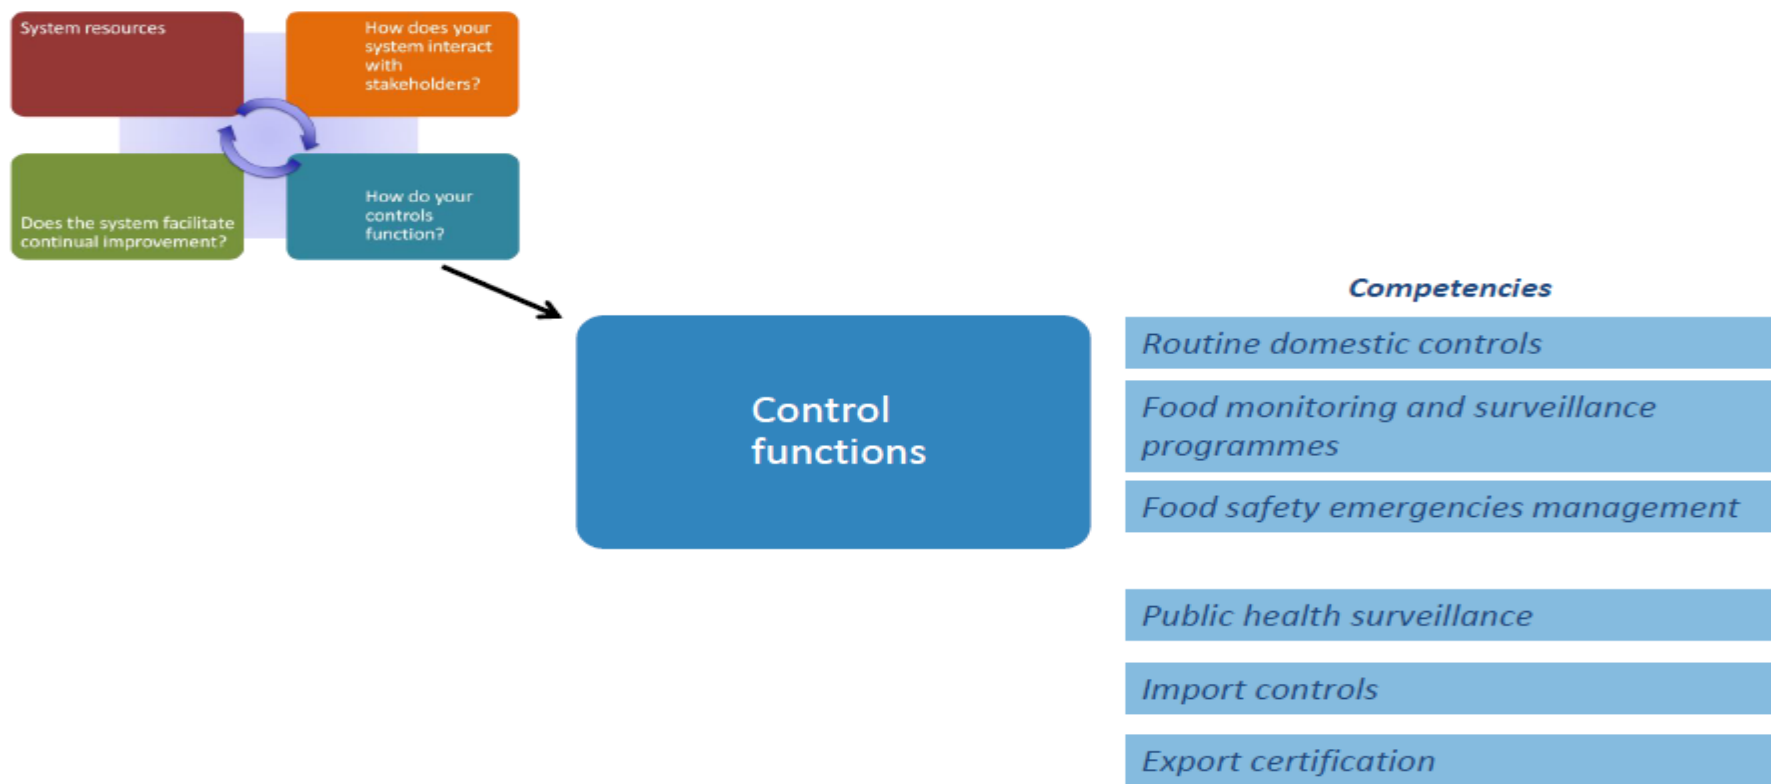

Does the system facilitate  
continual improvement?

How do your  
controls  
function?

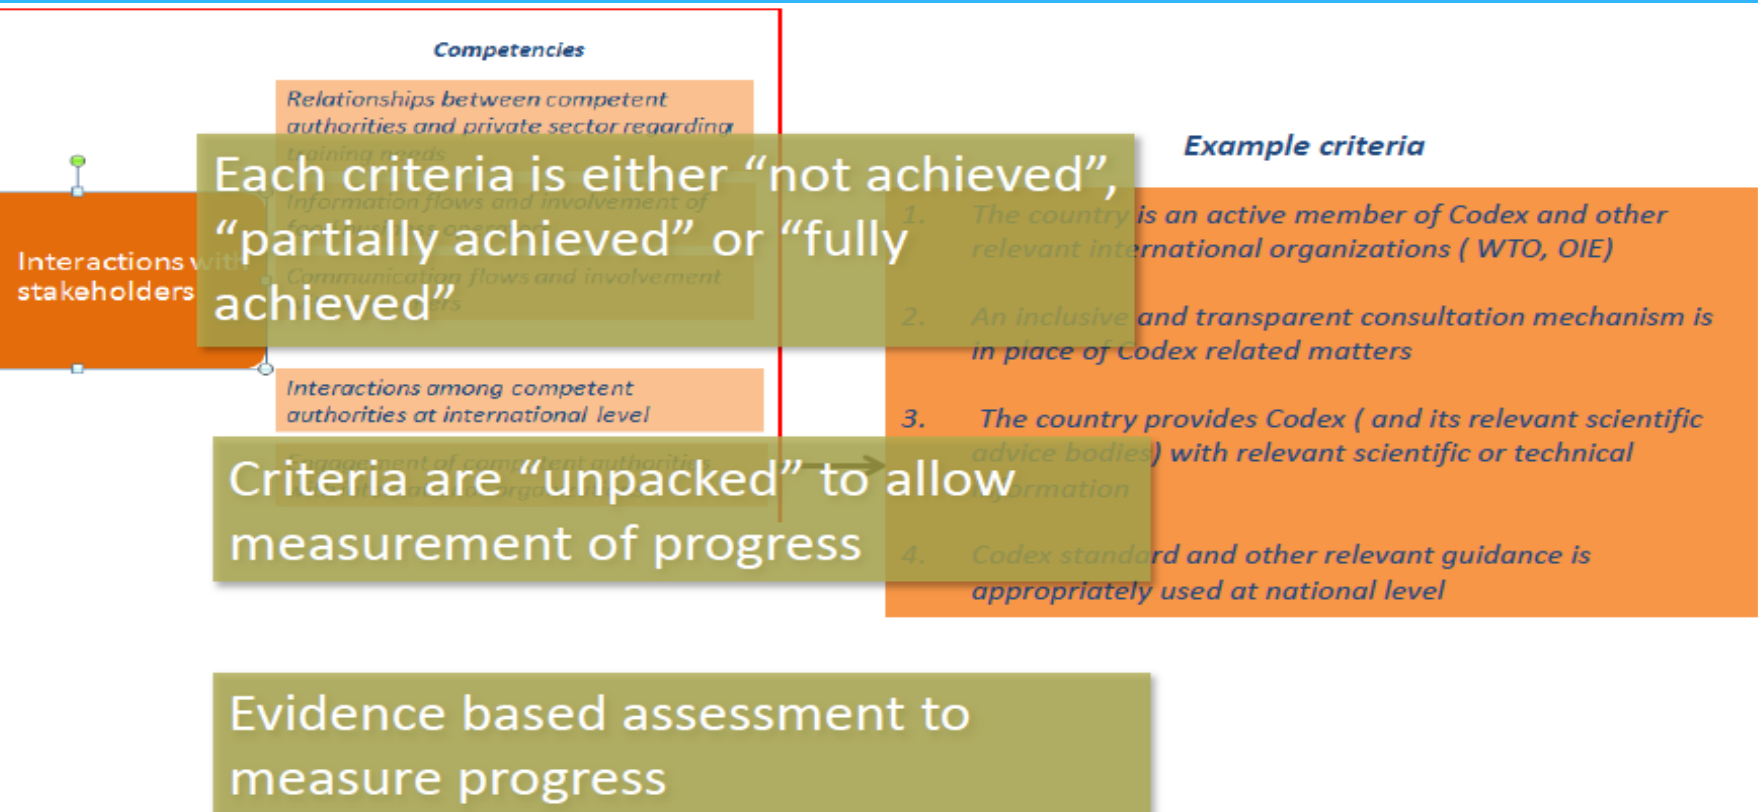

## How do your controls function?

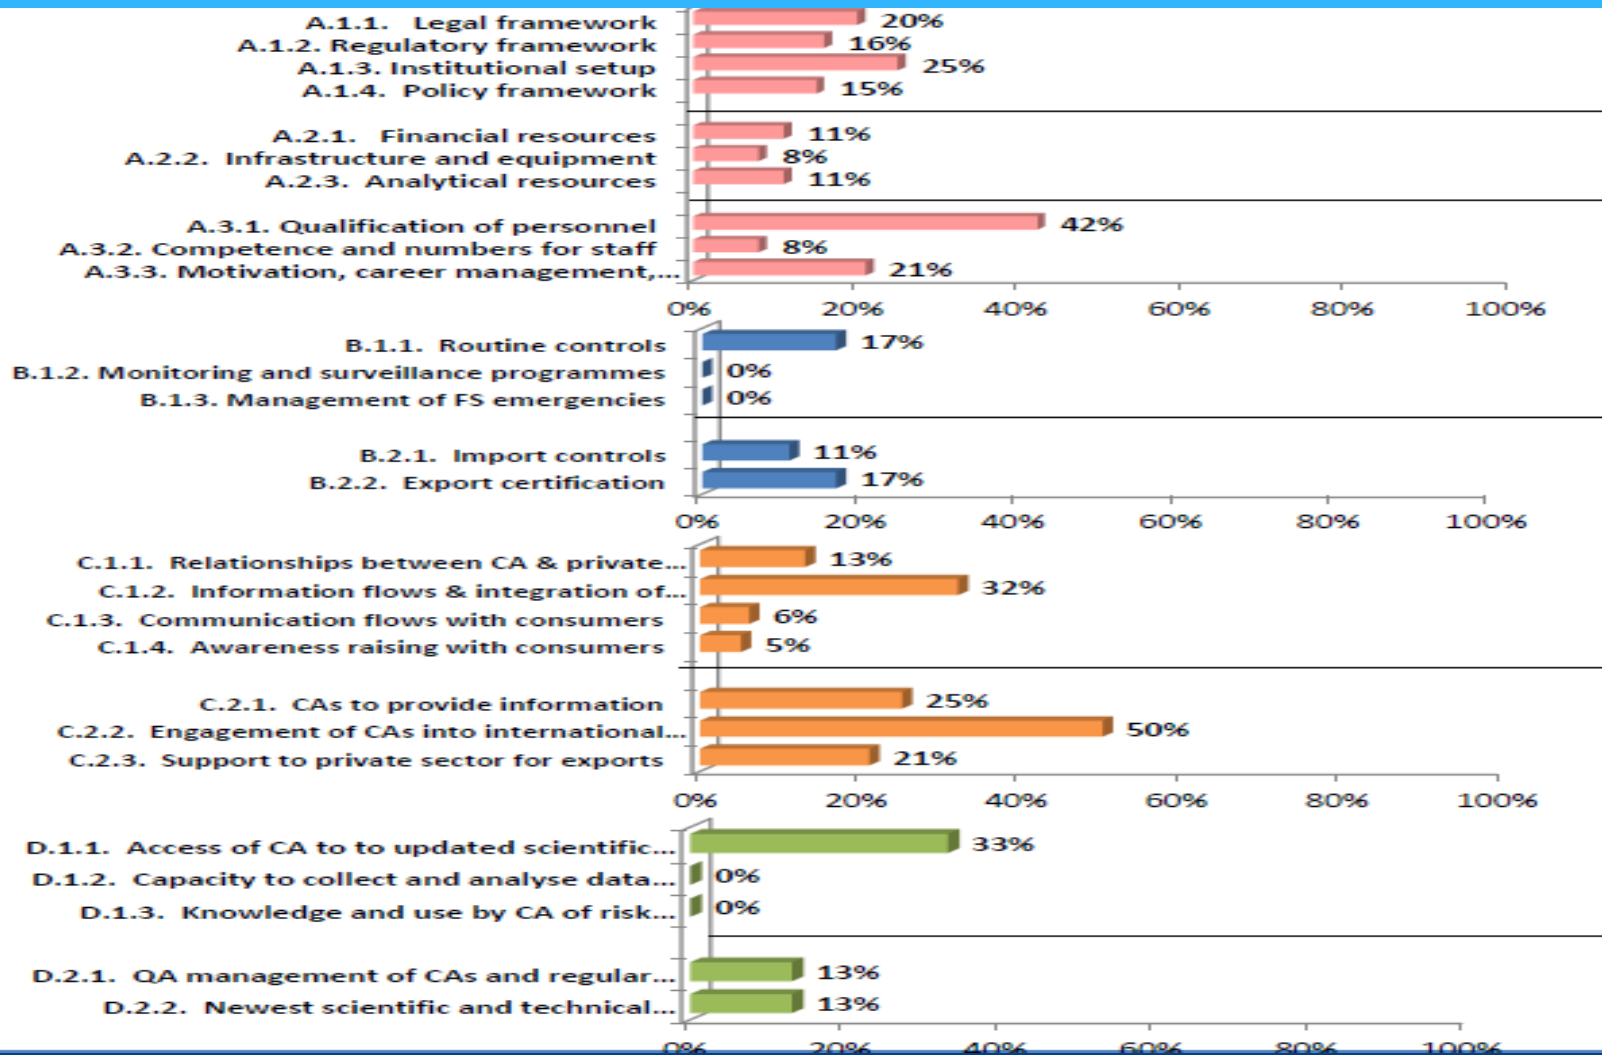

## Competencies are measured through specific criteria

# Food and Agriculture Organization of the United Nations

## Example of summary feedback provided to field tested country

**Food and Agriculture  
Organization of the  
United Nations**

## **National Food control systems: African situation**

- **Different levels of development: South Africa versus South Sudan**
- **Outdate laws**
- **Weak enforcement authorities**
- **Low level of inspection activities: in some countries used for collection of taxes than protection of consumers**
- **No linkage and association made between illnesses and a particular food. No stool samples take and tested. No food testing**

Food and Agriculture  
Organization of the  
United Nations

## **National Food control systems: African situation**

- **Industry not under pressure to invest in food safety ( considered unnecessary cost )**
- **When inspections done: not science or risk based ( salmonella in raw poultry )**
- **Poor or lack of laboratory support. Most have lab and equipments thanks to donors for photos but no consumables for lab testing**
- **Poor or lack of training and no information for consumers**

Food and Agriculture  
Organization of the  
United Nations

## **National Food control systems: Nigeria Case(challenges)**

- **Outdate law: Food and Drug act - No food safety law**
- **Multiple food safety authorities who are:**
  - **Uncoordinated**
  - **Weak enforcement activities, gaps, overlaps of mandates and duplication of work**
- **Relatively good laboratory infrastructure**
- **Training and information for consumers**

Food and Agriculture  
Organization of the  
United Nations

## National Food control systems: Nigeria Case(Opportunities)

- With an FAO TCP we were able over 2 years (2014-2016) to:
- Develop an agreed upon standalone **Food Safety and Quality Bill** For Nigeria. Separate from the FDA, Cover quality issues and cover the food chain to include food and feed.
- Propose an agreed upon **institutional reform**:
  - Better clarification of mandates: roles and responsibilities for the various Food Safety Authorities to avoid overlaps and duplications

Food and Agriculture  
Organization of the  
United Nations

## National Food control systems: Nigeria Case(Opportunities)

### ➤ Institutional Reforms:

- Creation of a **National Food Safety Management Committee (NFSMC)** to coordinate all food safety activities of CAs – Representatives from all government CAs, states, academia, private sector and consumer associations
- NAFDAC whose mandate will change to provide **Secretariat** to NFSMC
- Setting of a **Council** of 5 most important Ministers in food safety: Health, Agriculture, Trade, Environment and Science + 1 Rep of private sector + 1 Rep of consumers. Highest authority chaired by the **Vice**

**Food and Agriculture  
Organization of the  
United Nations**

## **National Food control systems: Conclusions**

- **African food control systems are diverse and at different level of development**
- **Characterized in general by outdated legislations and non science based regulations**
- **Weak or lack of enforcement activities by various uncoordinated CAs with gaps in the coverage of the food chain, overlaps and duplication of mandates**
- **Poor or lack of laboratory infrastructures and support**
- **Poor or lack of IEC activities**

Food and Agriculture  
Organization of the  
United Nations

## National Food control systems: Conclusions

- Poor or lack of laboratory infrastructures and support
- Poor or lack of IEC activities
- **However**, with the support of regional and international **partners**, **awareness** and **political will at country level**, it is possible to turn the situation around.
- Building efficient and performant National Food Control Systems: **Long term undertaking** which requires both **human** and **financial** resources

Food and Agriculture  
Organization of the  
United Nations

**Thank you for your kind attention**
